

# Field Inspection and Phytosanitary Services

Illinois Crop Improvement Association • 217-359-4053 • Champaign, IL • [www.ilcrop.com](http://www.ilcrop.com)

The Illinois Crop Improvement Association provides a range of field inspection and phytosanitary services.

“You can rely on Illinois Crop for all kinds of inspection, audit, and certification programs, including coordinated multistate programs,” CEO Doug Miller says.

## Services

- Phytosanitary field inspections – accredited by the National Seed Health System.
- Purity, isolation and pollen-control inspections – for Certification, Quality Assurance, Identity Preserved.
- Custom field-inspection programs and Field Inspection (FI) only options.
- Wildland Collected Native Seed

(Source ID) and Weed-seed Free Forage and Mulch programs.

- On-farm assessments of compliance for Insect Resistance Management (IRM).
- Intellectual property rights, trait stewardship, and third-party research and assessments.

As a courtesy to their Illinois growers, Miller says Illinois Crop has posted a corn isolation quick reference for those looking for corn isolation standards.

He notes that standards may differ from state to state.

Illinois Crop is accredited under the National Seed Health System to perform phytosanitary seed crop field inspection of corn, soybean, wheat, sunflower, sorghum bicolor, and cotton.

*Professional, unbiased information, and valuable services that facilitate the production and maintenance of quality seeds and grains is the mission of all staff and inspectors at Illinois Crop. Illinois' seeds and grains are used across the country and around the world.*

Illinois Crop phytosanitary field reports can be used to obtain Federal Phytosanitary Certificates. ■
