

DISCO SILVER L-1901: LOOKING PRETTY GOOD

- Optimal aesthetics, visibility, and coverage without the hassle of powders
 - Improved wet-flow performance on standard slurry rates
 - Improved dry-flow versus standard packages
- Easy application - just spike your current ready-to-apply protection package
 - Minimized dust and improved flow

A customized look for a customized seed treatment

A clear/silver polymer for soybean that enhances the color of your current plant protection (PP) package. The dull finish of your current treatment is transformed to an eye-catching product you will be proud to provide your customers. Available in limited supply from fall 2020.

Simplify your soybean seed treatment operation

If appearance and flowability without the hassle and expense of powder is what you are looking for, Disco Silver L-1901 is the best in the market. An easy add on to current treatments that can be fine-tuned to meet the needs of your program and budget. Your customers will notice the improvement in coverage and the glossy appearance of the seed, while your treatment team notice an improvement in flow and dust from handling the finished product. Disco

Silver L-1901 helps keep your PP package in place with improved dust-off resulting in better performance for your customers.

Improve operational efficiency

An optimum rate of 1.5 oz per cwt gives a look that is normally achieved only with the addition of powders. Great cosmetic results are also observed at reduced rates. Run in the humid conditions of the Southeast during the summer, Disco Silver L-1901 greatly improved flow and tack in the treater, discharge hoppers, and loading bins.

Before you make the capital investment in powder feeders, ask for a trial on your own system. Let us show you what your treatment program can be with Incotec seed treatment technologies.

DISCO SILVER L-1901 FOR SOY SEED

Abrasion

The lower the value, the better the coating scores on abrasion resistance. Disco Silver L-1901 displays significantly enhanced abrasion resistance. This product delivers high cosmetic quality from coater to farm.

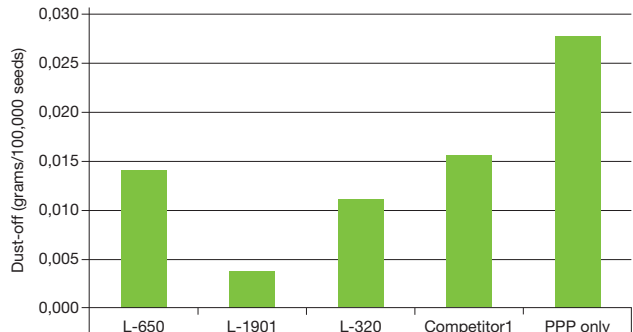

Abrasion resistance

Dust-off

Less dust means optimal protection of your valuable seeds and less exposure to dust for worker and environment

Dust-off

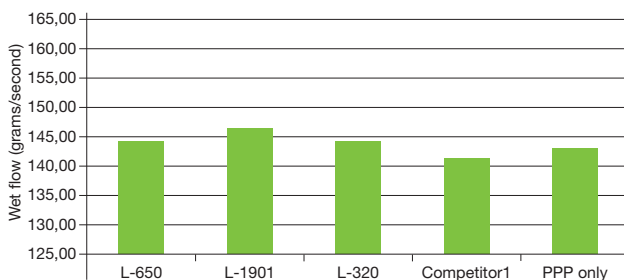

Flowability

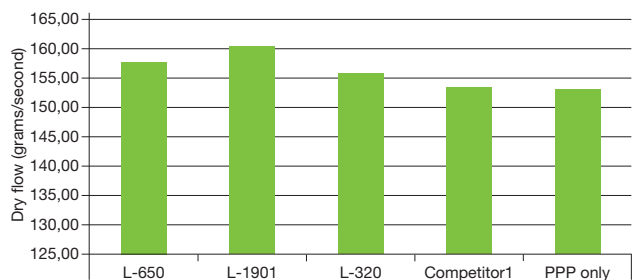

An application process can be disturbed when seeds are sticking, bridging or clumping. The better the flowability, the more efficiently the seed treatment and handling process will perform. The flowability tests are run to measure the ability of a seed to pass through the seed handling equipment.

The higher the value, the better the coating scores on flowability. Disco Silver L-1901 displays better wet and dry flowability results compared to benchmarked products.

Wet flow

Dry flow

MISSION ZERO
SUSTAINABLE TO THE MAX
