

Germain's Seed Technology's coating systems utilize state of the art process and applications technologies that produce high-quality seed coatings that improve your crop's performance. Derived from coating materials successfully applied to tens of millions of acres of sugar beet, **prosun™ precise** pellet is scientifically formulated for sunflower. **Prosun™ precise** provides added weight and a smooth, slick finish that enables sunflower seed to flow smoothly through precision air planters helping growers achieve accurate field populations.

## Product Benefits:

- Adds weight to seed for improved placement in the field
- Reduces dust off
- Maximizes flow ability through planters
- Uniform coating and seed sizing
- Precision application of agrochemicals

## Germination and Emergence Trial Results

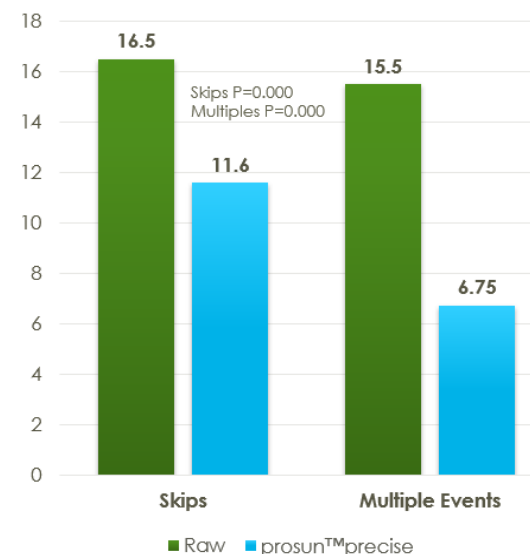

Data represents 4 trials combined; NDSU REC's Carrington & Minot 2017, 2018.

Four varieties/seed fields tested in each trial. Seeds were counted equally between treatments and planted with a cone planter. Sizes within a seed lot originated from the same seed field. No significant differences in germination or emergence observed.

## Skips and Multiples Trial Results

Data represents 3 trials Combined; NDSU REC's Carrington 2017, 2018, Minot 2018.

Two varieties tested in each trial, sizes within a variety from same seed field. Number of skips and or multiples per 100 feet of row.

**Prosun™ precise** consistently reduced the number of skips and multiple seed planting in both NDSU REC's Carrington and Minot trials.

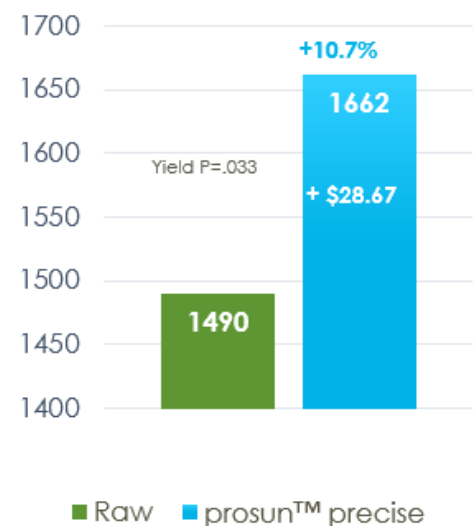

Precision seed placement and singulation significantly improved the final field stand optimizing yield.

## Yield Improvement Trial Results

Two varieties tested in each trial, sizes within a variety from same seed field.

Data represents 3 trials combined; NDSU REC's Carrington 2017, 2018, and Minot 2018. Revenue calculated using an average NuSun selling price of \$16.67, Enderlin, North Dakota (Source: NSA Daily Market News)
